

# Master marker and image placement

Place the printed marker library consistently before running a scenario.

## PLACEMENT

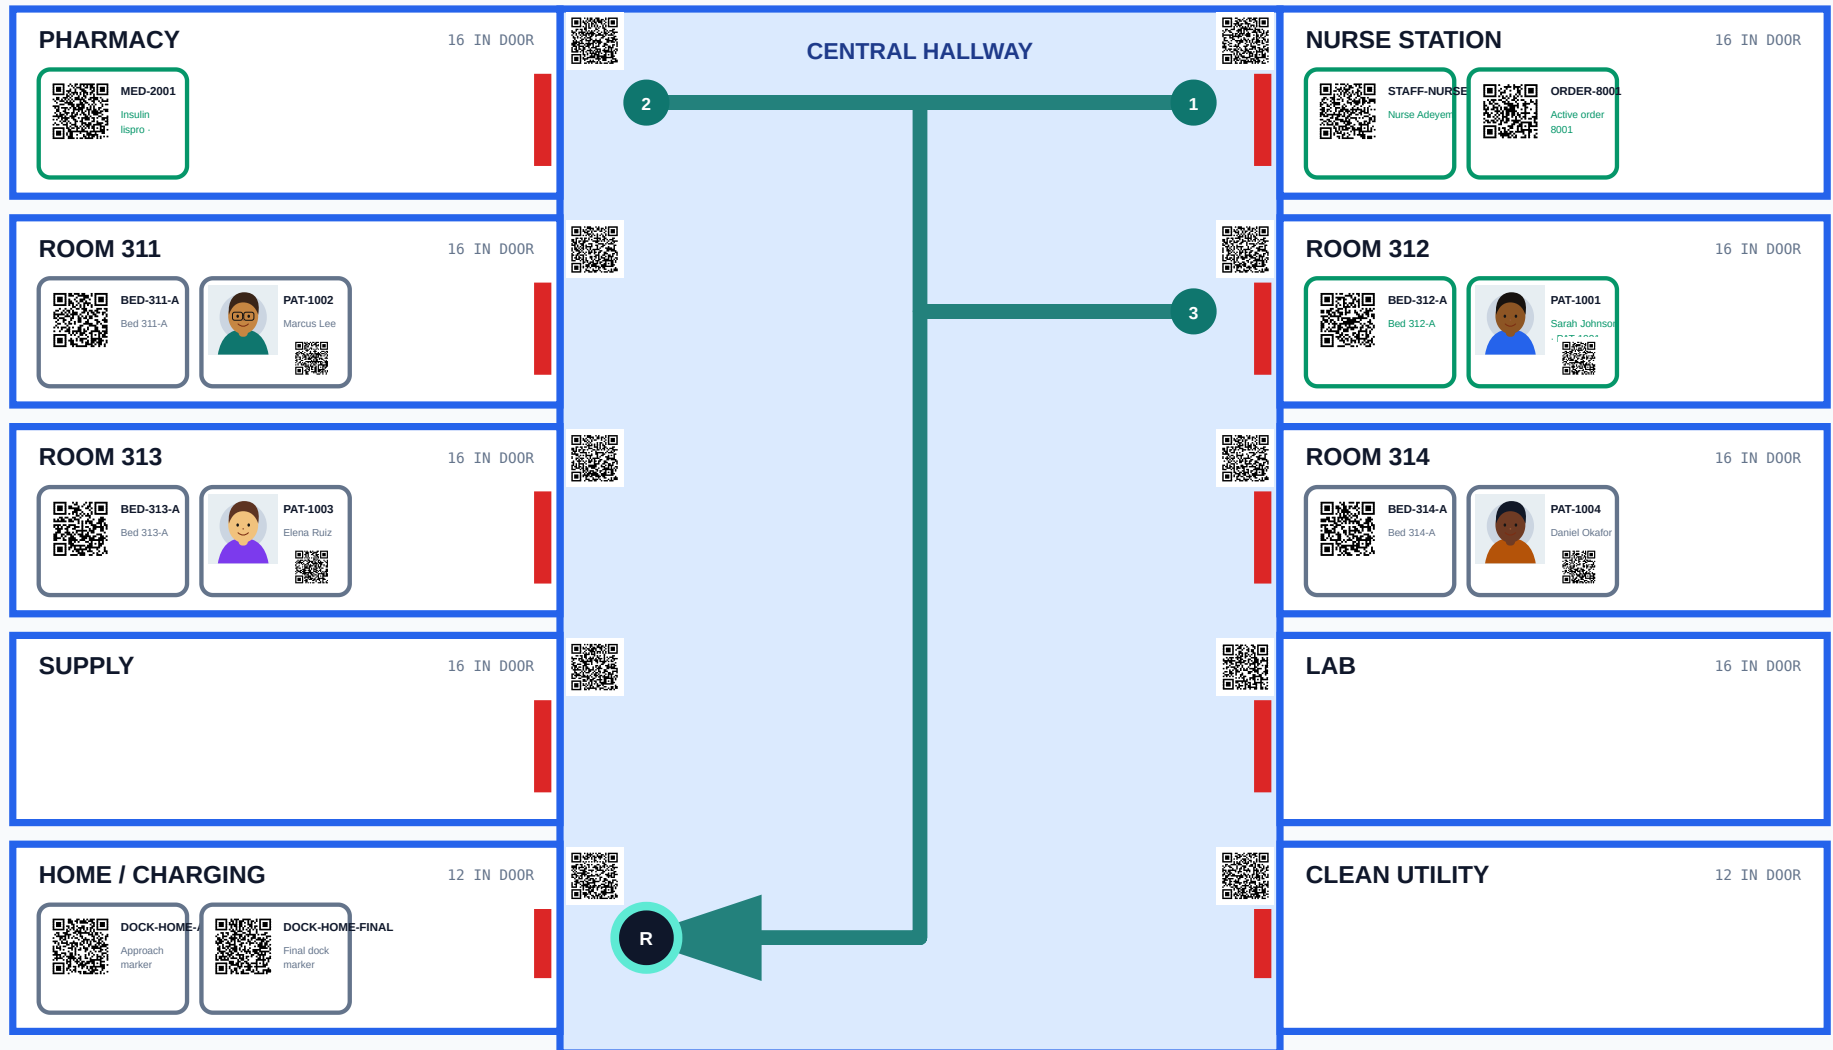

### PROPOSED LAYOUT — OPERATOR CONFIRMATION REQUIRED

Every doorway also receives its matching LOC-\* QR facing the hallway.

## Scenario 1 · Authorized medication delivery

Deliver insulin lispro to Sarah Johnson in Room 312, Bed 312-A.

AUTHORIZED PATH

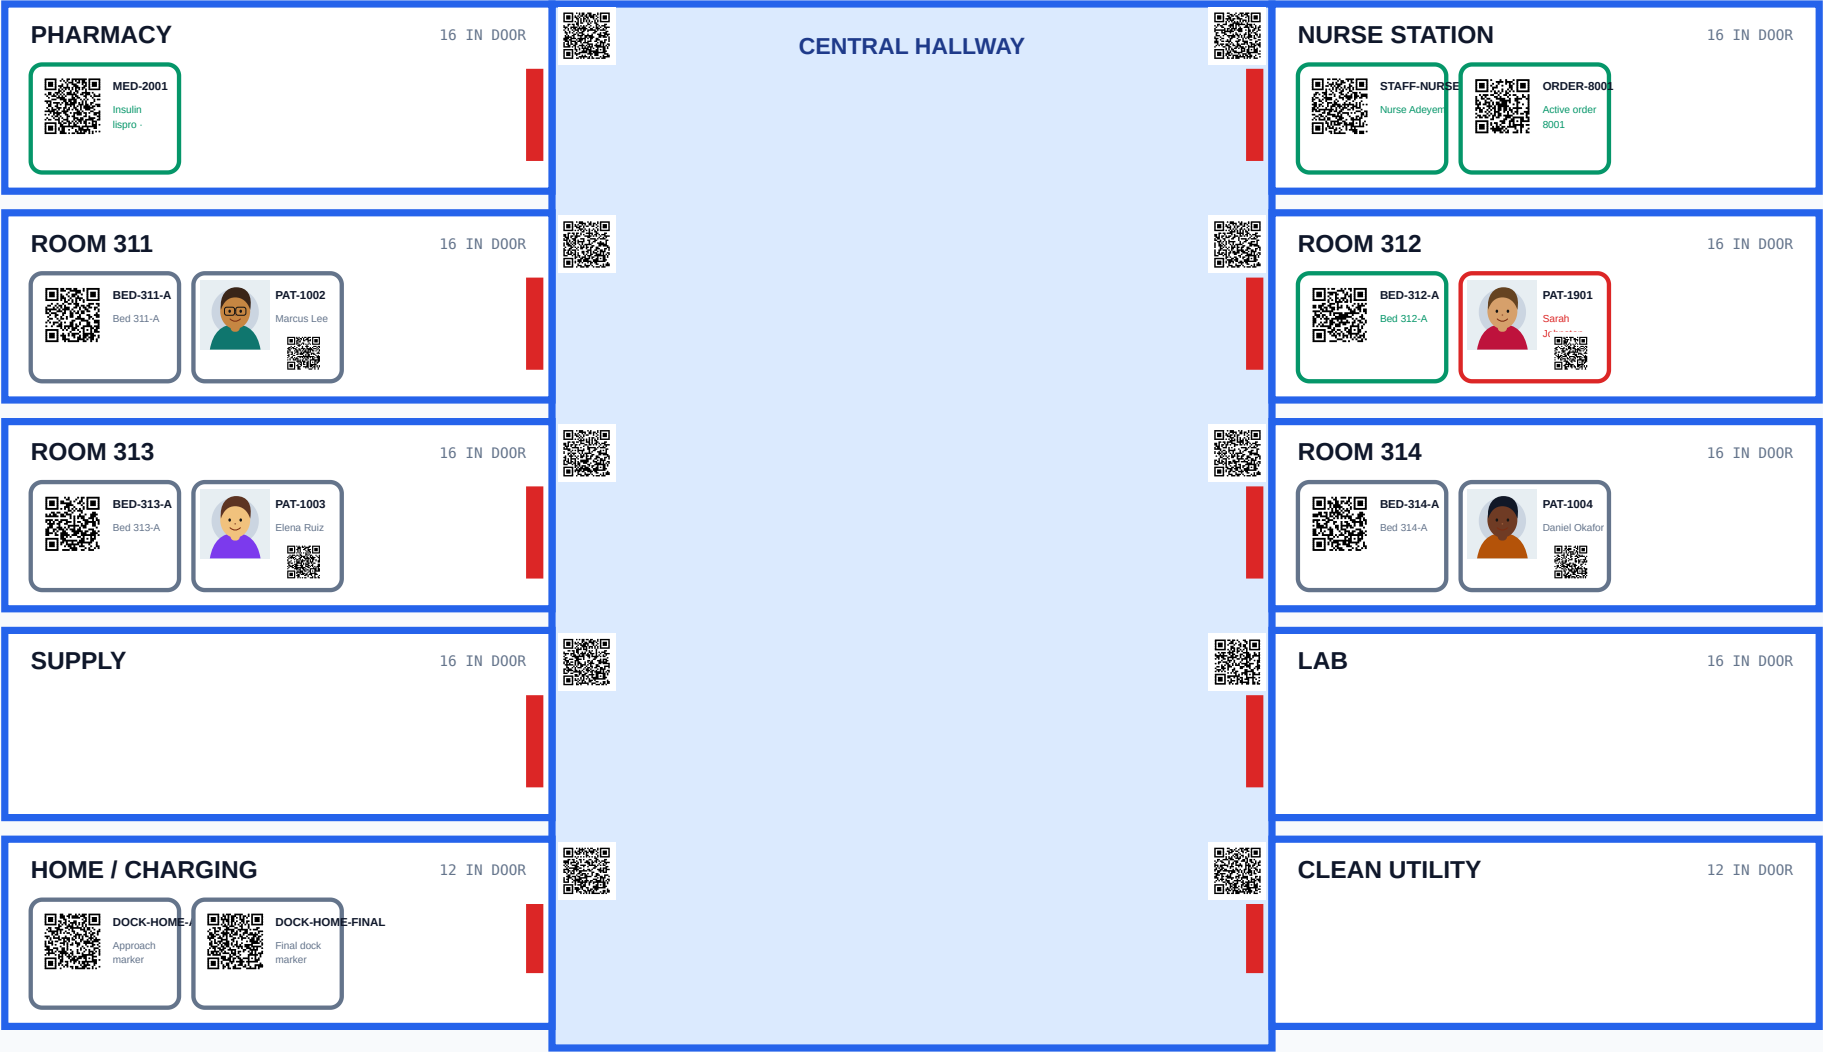

All identities match; evidence commits; one grant permits the declared mission.

Show evidence ID and grant ID before movement; return and reverse into Home.

# Scenario 2 · Similar-name patient mismatch

Deliver insulin lispro to Sarah Johnson, PAT-1001, in Room 312.

UNAUTHORIZED

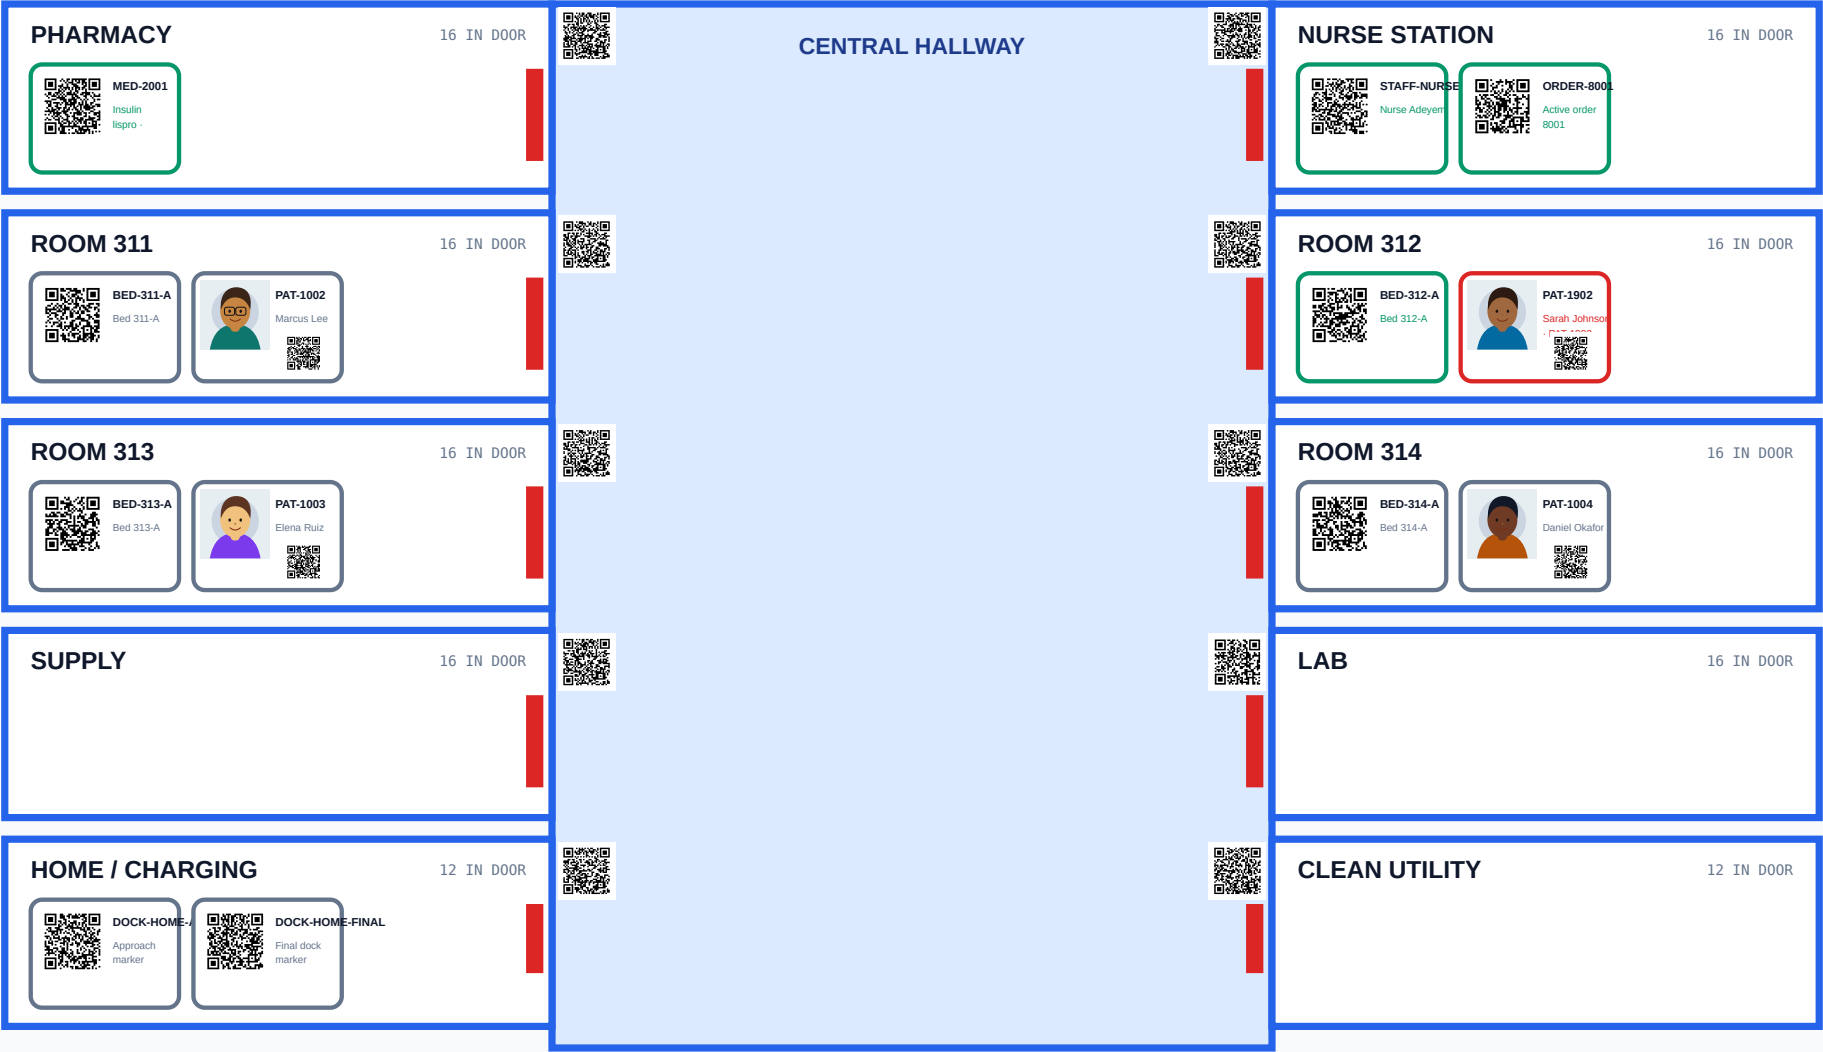

**PAT-1901 is Sarah Johnston. Patient identity remains unresolved; no dispatch.**  
The similar spelling is intentionally insufficient. Robot remains at Home.

# Scenario 3 · Same name, wrong patient number

Deliver insulin lispro to Sarah Johnson, PAT-1001, in Room 312.

UNAUTHORIZED

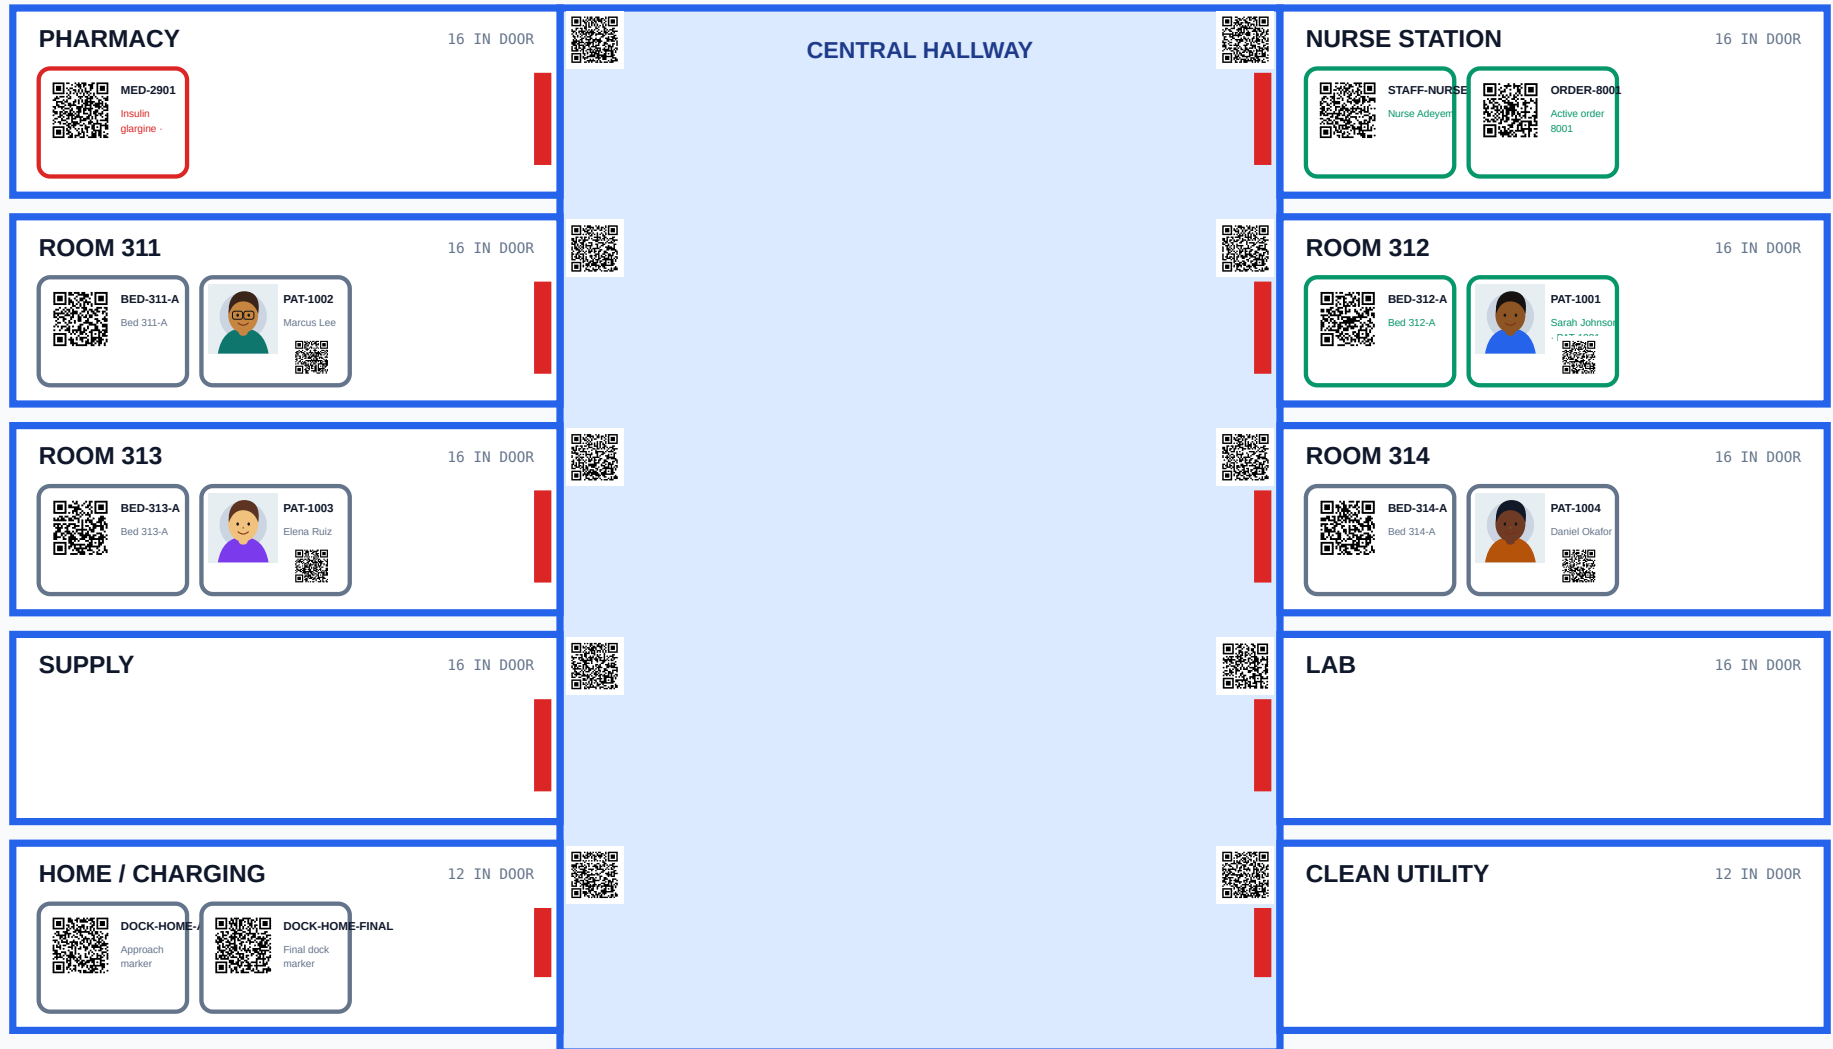

**Presented PAT-1902 has the same name but a different identifier; no dispatch.**

Human-readable name equality never overrides the patient identifier.

## Scenario 4 · Wrong medication formulation

Deliver insulin lispro, MED-2001, to Sarah Johnson in Room 312.

UNAUTHORIZED

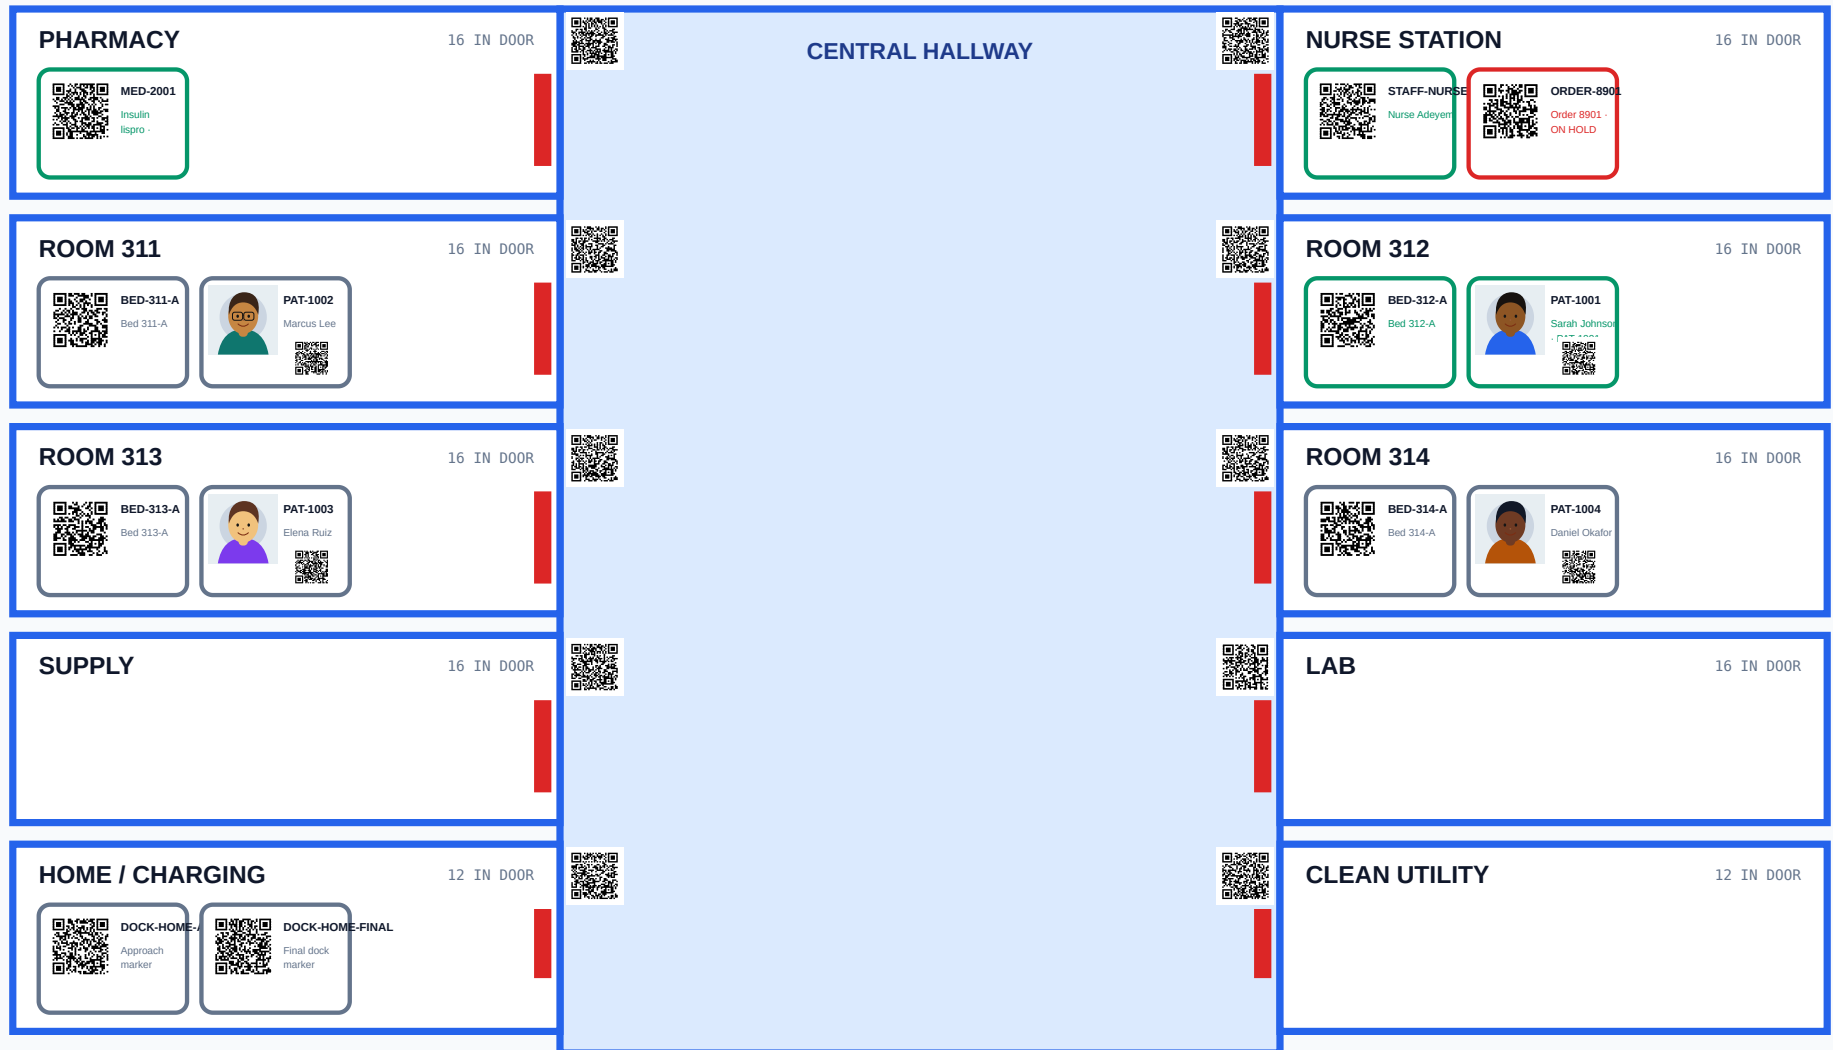

**MED-2901 is insulin glargine; medication match fails; no dispatch.**

A related medication name is not an acceptable substitution.

## Scenario 5 · Physician order on hold

Deliver insulin lispro to Sarah Johnson in Room 312.

UNAUTHORIZED

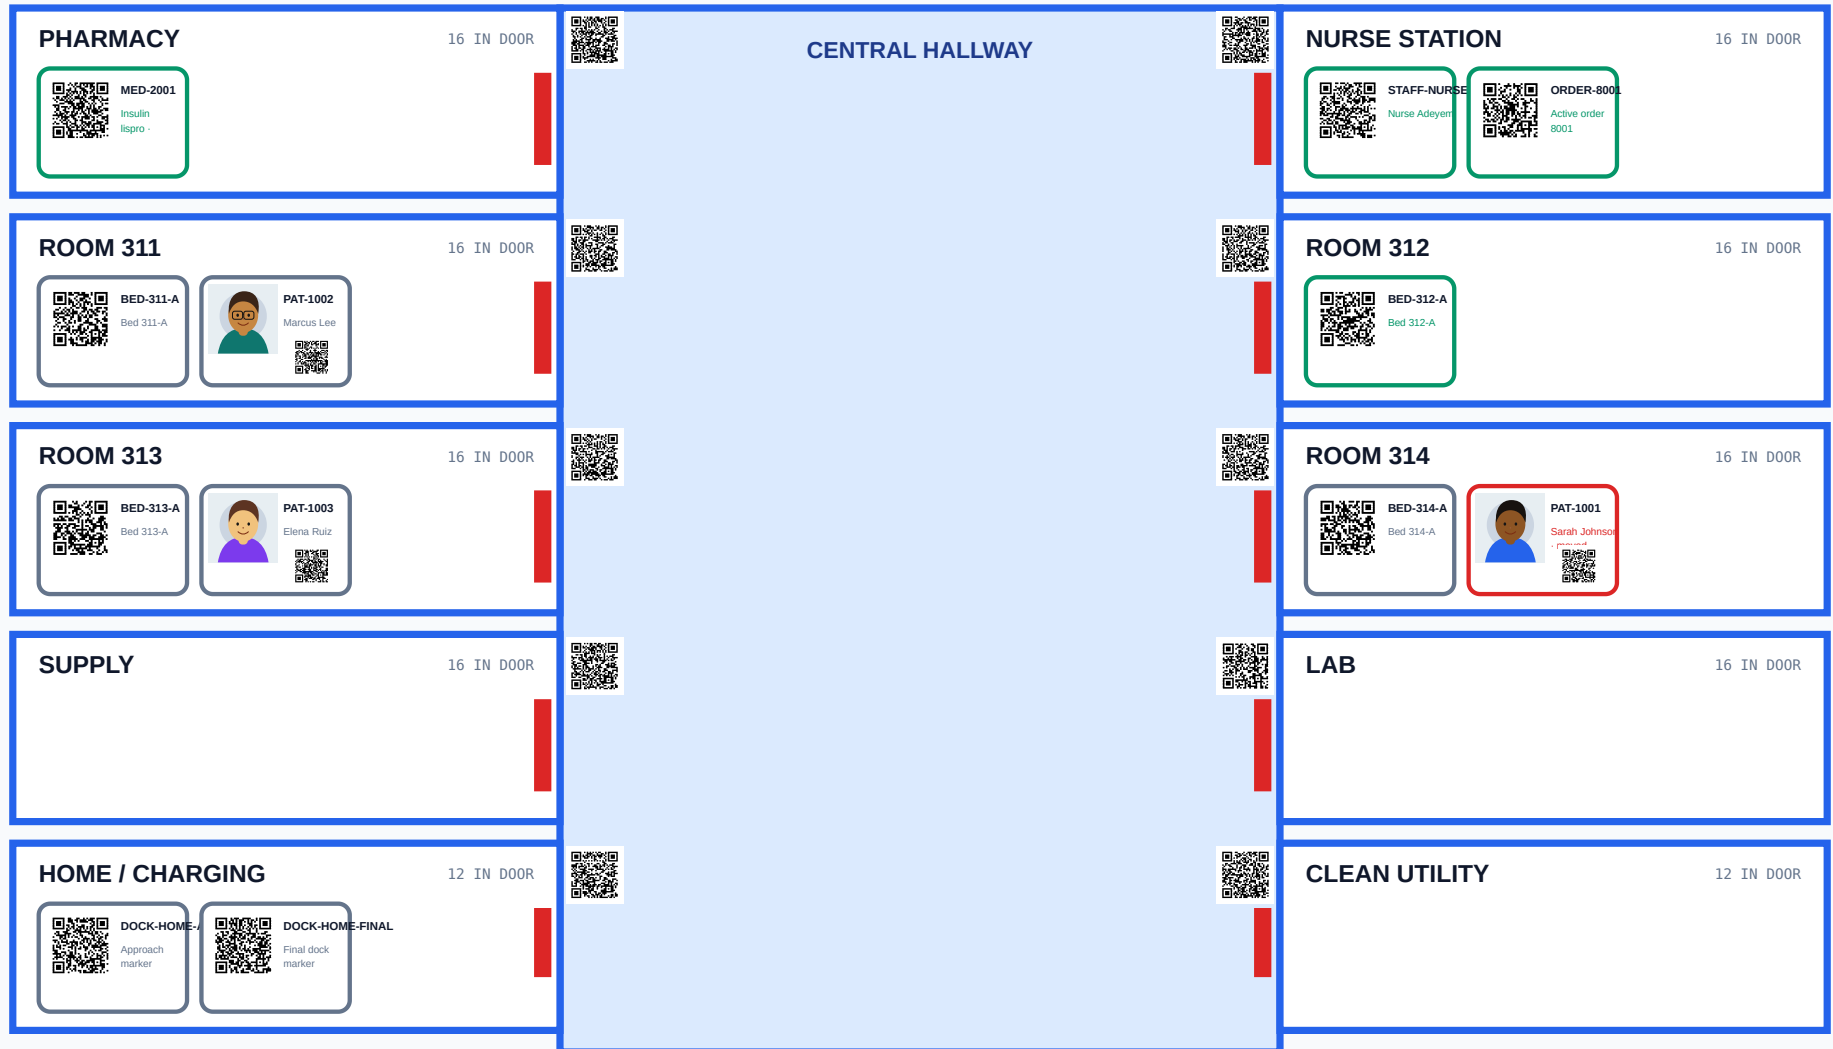

**ORDER-8901 is on hold; physician-order condition fails; no dispatch.**

Correct patient and medication do not compensate for an inactive order.

## Scenario 6 · Patient moved to another room

Deliver insulin lispro to Sarah Johnson in Room 312, Bed 312-A.

UNAUTHORIZED

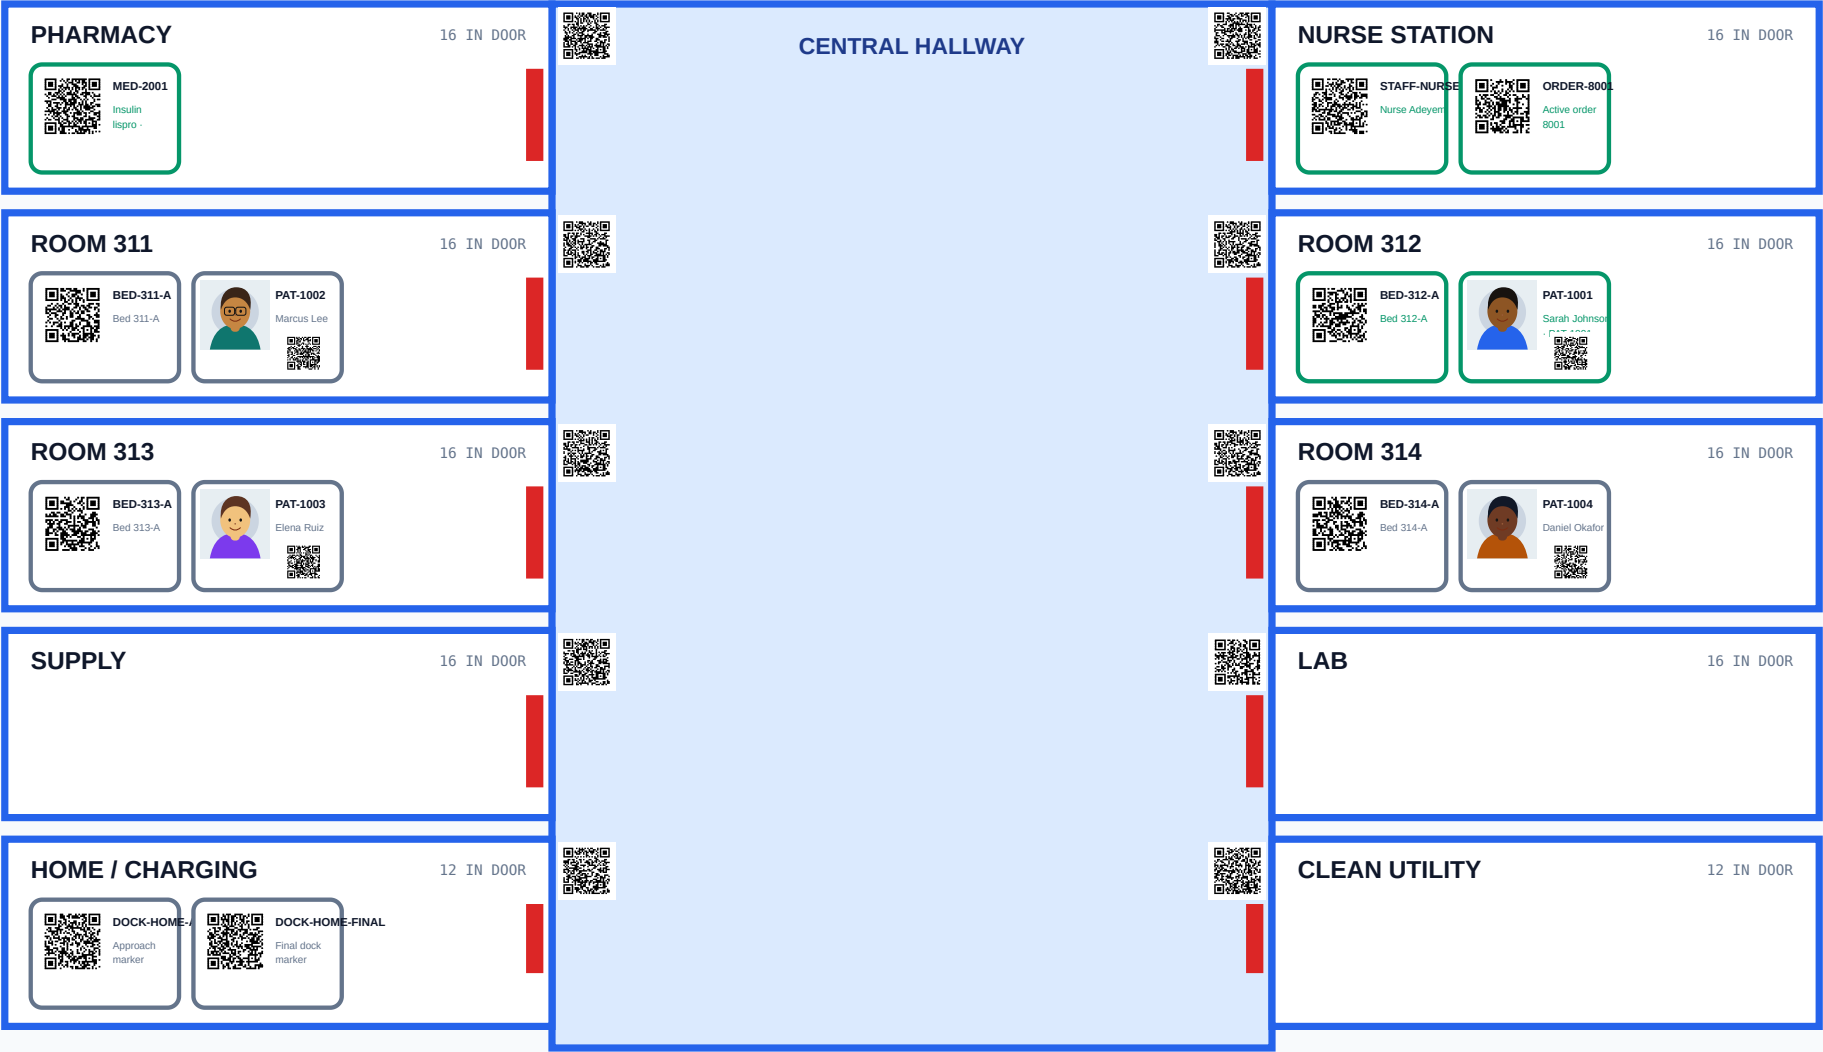

**PAT-1001 is now in Room 314; ordered location is stale; withhold and re-resolve.**

Do not silently redirect. Open a new inquiry and require updated evidence.

# Scenario 7 · Evidence store unavailable

Deliver insulin lispro to Sarah Johnson in Room 312, Bed 312-A.

COMMIT FAILED

All physical facts match, but evidence cannot commit; no grant and no movement.

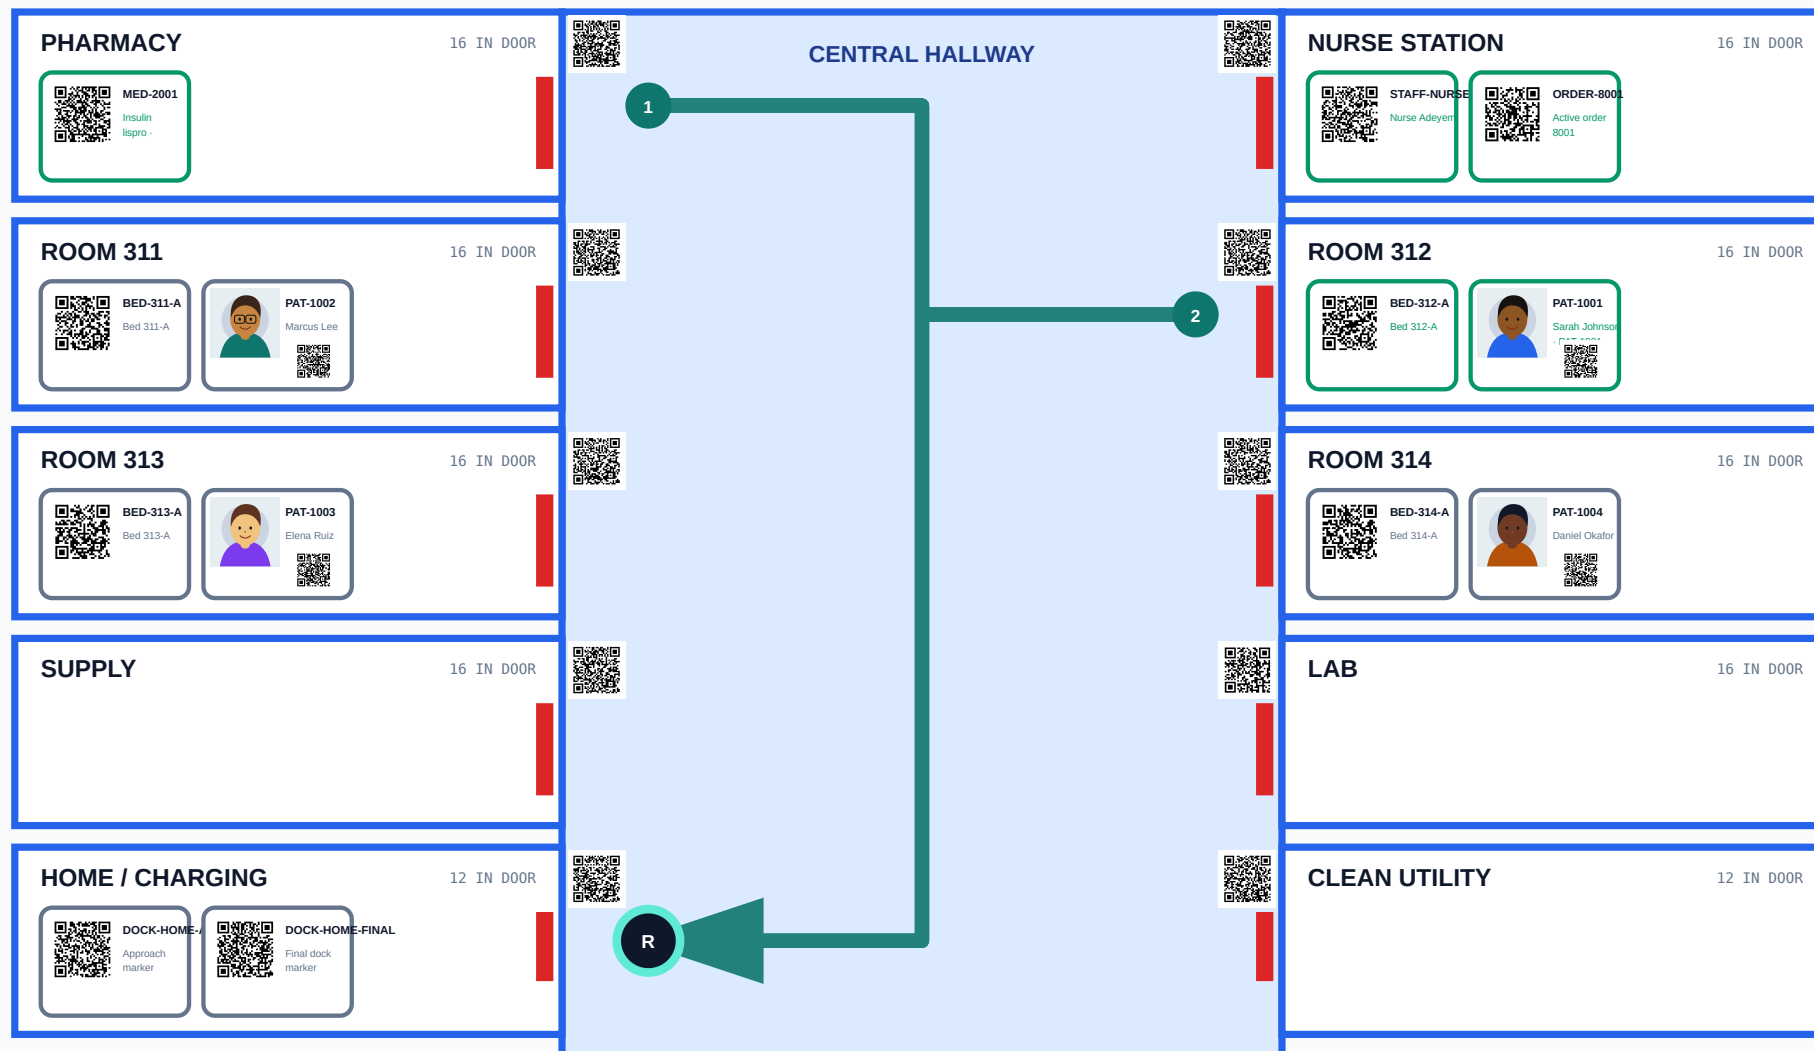

This is the constitutional failure case: capability and conditions are insufficient without durable evidence.

## Video movement 1 · Authorized departure

A committed evidence record and single-use grant now permit the declared Room 312 mission.

## AUTHORIZED PATH

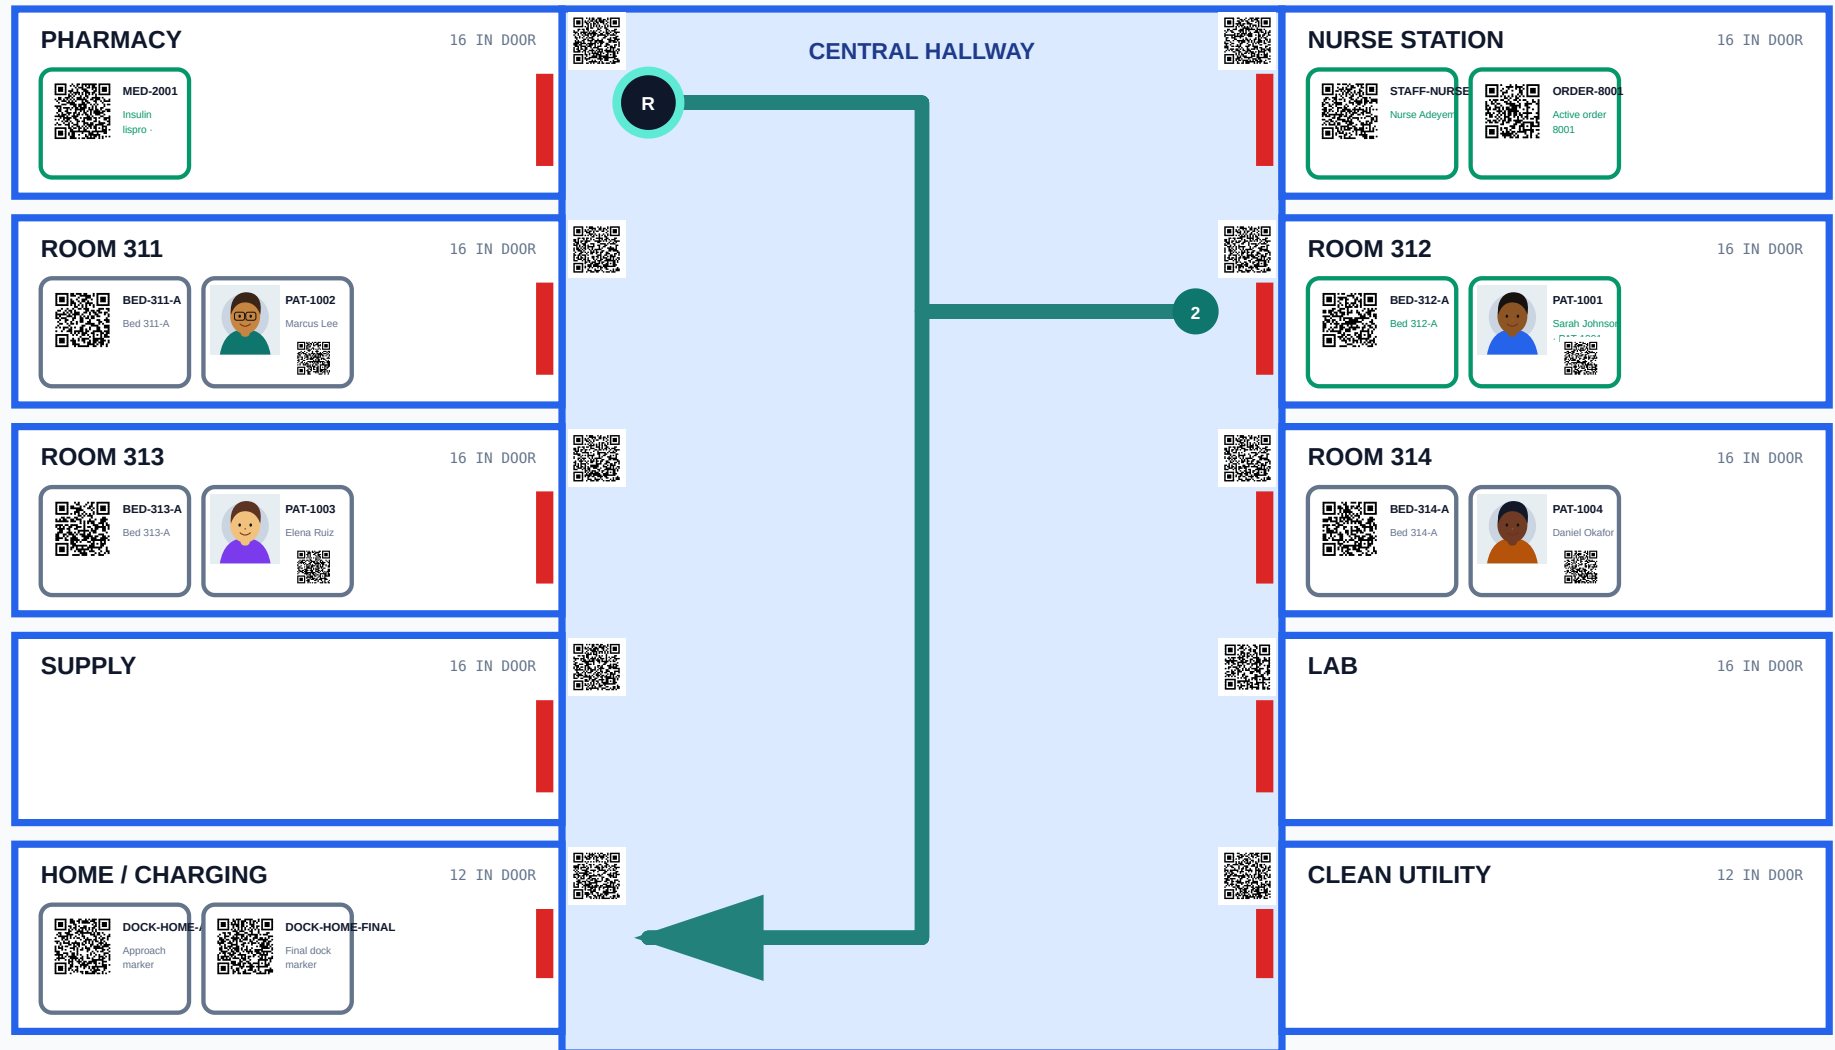

**Robot leaves Home only after AUTHORIZED appears in the live runtime.**

Video shot: hold on the stationary robot, show the evidence/grant IDs, then begin movement.

## Video movement 2 · Medication collected

Collect the matched insulin lispro package at Pharmacy.

AUTHORIZED PATH

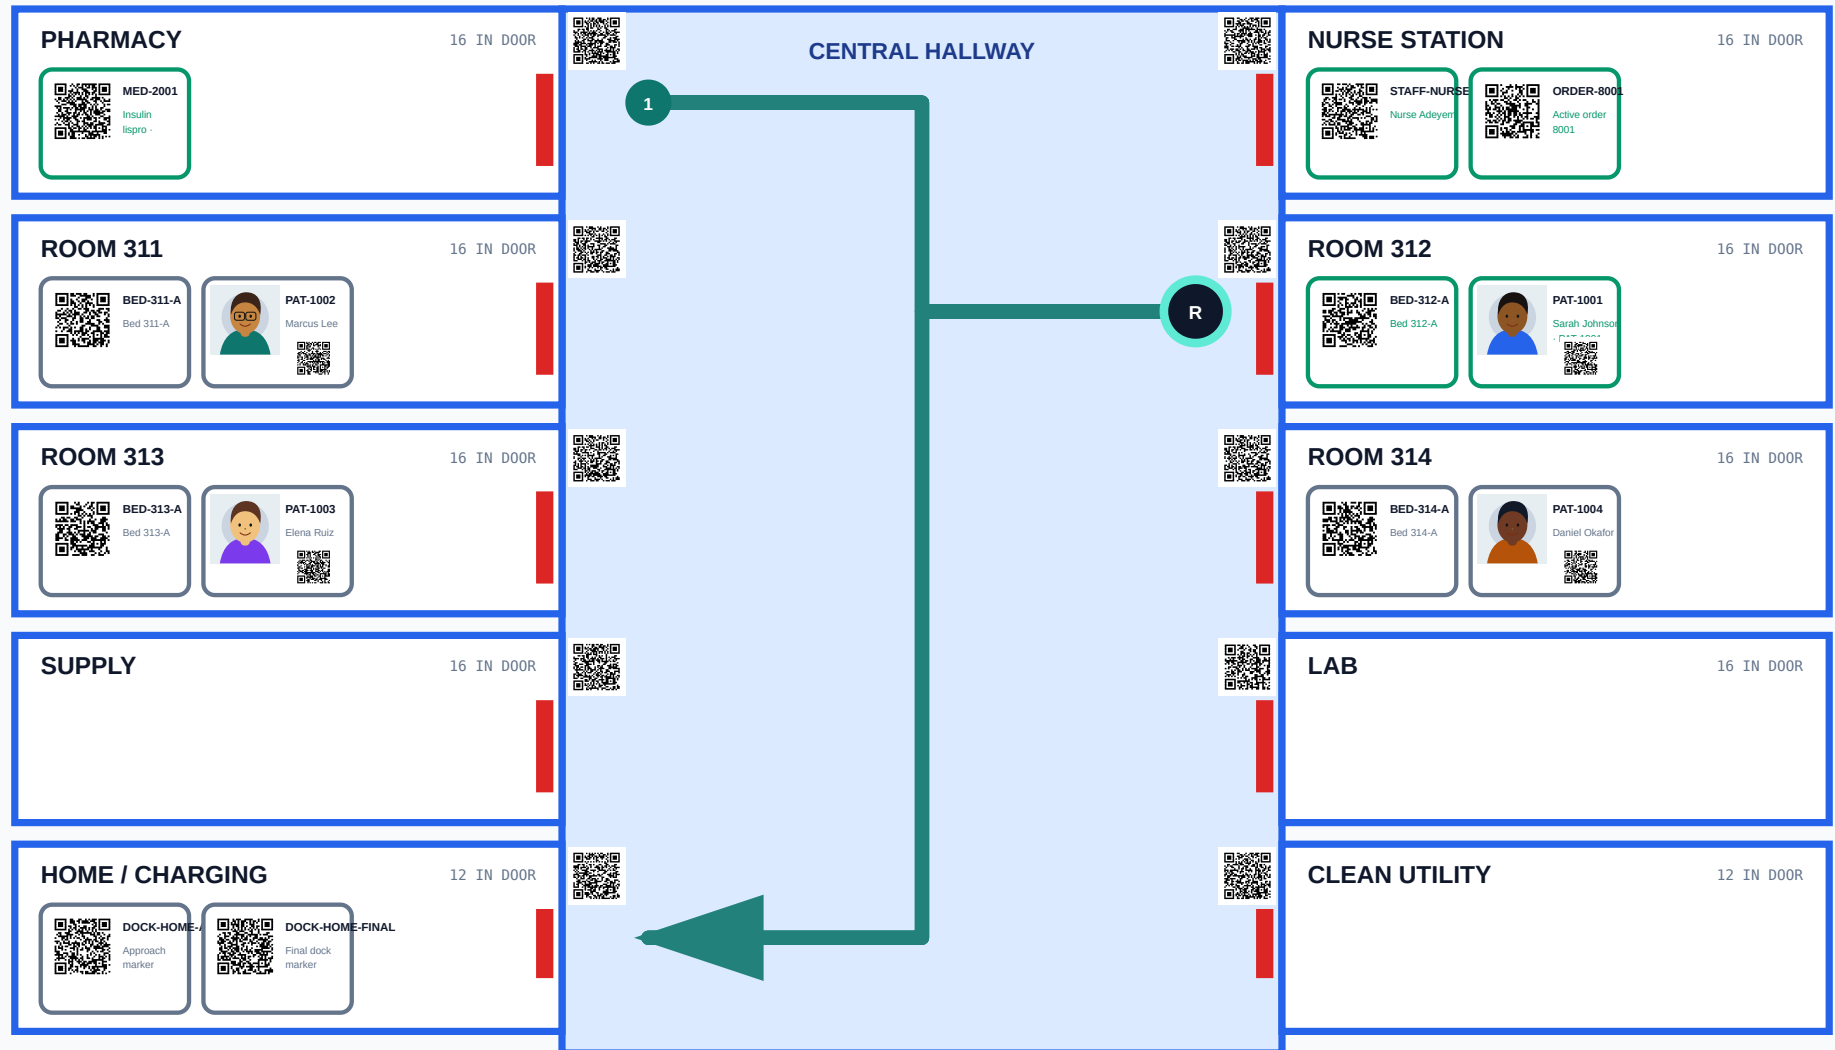

Robot reaches Pharmacy; MED-2001 remains bound to the authorized action.

Video shot: show the robot beside the MED-2001 image, then continue down the hallway.

## Video movement 3 · Room 312 arrival

Approach Room 312 and confirm Bed 312-A and PAT-1001.

AUTHORIZED PATH

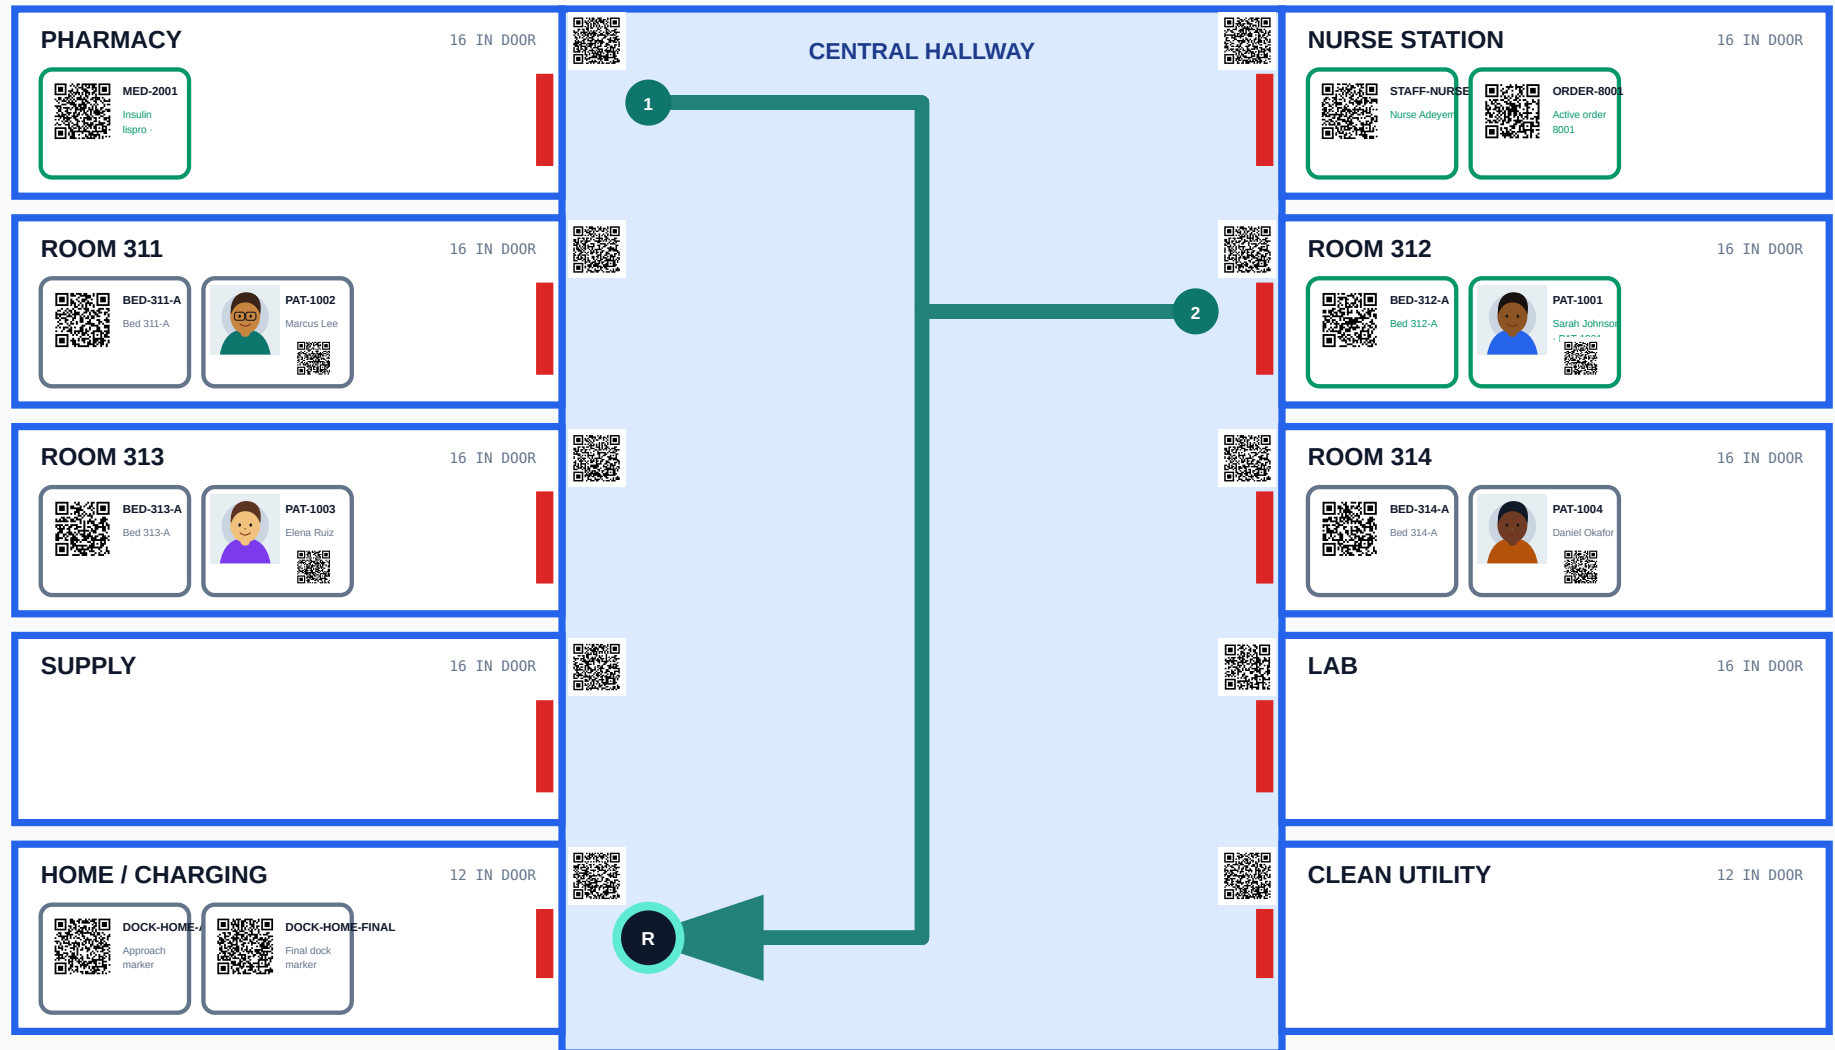

Destination, bed, patient, and medication agree with the committed mission evidence.

Video shot: show the doorway QR, bed QR, fictional face, and patient QR separately.

## Video movement 4 · Return and complete

Return from Room 312 to Home after the declared delivery completes.

AUTHORIZED PATH

**Robot returns to Home; execution and mission-completion records close the interaction.**

Video shot: reverse into the 12-inch Home bay only after docking is separately commissioned.
